

alien space bowling game

- bowling balls are planets (fun colorful balls, planets with silly names)
- bowling pins are alien cats
- fun scifi ui and gui
- scifi, space, and cat sound effects
- 5 lane selection for bowling placement
- space billboard asset is what connects to the bowling game
- questions between each turn.
- single player and multiplayer (same device) options available
- a turn consists of one player rolling the ball one time (not a two roll turn)
- heavily inspired by baamboozle bowling game
- powerups can be earned by hitting asteroid shaped icons in line with a bowling lane they chose (between the numbers and the bowling pins). power ups are used in the

next turn and can be applied by selecting an icon on the right that appears only when they have earned a power up.

- starting power ups will be:
 - Strike Shuttle: guaranteed strike (chance of earning from asteroid icon = 5% chance within a game, incredibly rare) (animation: shuttle spins and makes a strike motion against the bowling pins, replacing the ball icon)
 - UFO: removes two pins at random (chance of earning from asteroid icon = common) (animation: ufo flies in and does an abduction animation, raising the bowling pins and having them disappear as if they are now in the ufo. then the player starts their turn)
 - Meteor Shower (combination of the commit and asteroid assets): meteor shower divides the 5 option lanes into 3 options only. the player then has only three lanes to choose from. this is the only negative powerup, removing the accuracy of the lane choices (chance of earning from asteroid icon = common) (animation: commits and asteroids flying at lanes, when landing they should make a small explosion against the lane numbers, after 5 seconds, only 3 lane options should be available)
- the cute alien costume will be earned when students answer 500 correct questions in the space bowling game
- on launch screen, students can preview cute alien costume as prize for meeting the question goal
- in settings, students can lower levels of background music (off, low, medium, high) and sound effects (same)
- on launch screen, game options for single (vs. cpu) or multiplayer (same device), number of rounds (default is 10 rounds), and number of questions between turns (default is 3). both rounds and questions should be shown as slider menus. the min number of rounds is 5 and the minimum number of questions between turns is 1.
